

THE TECHNOLOGY

In apples, many of the beneficial phytochemicals are found in the peel, up to six times more than in the apple flesh. Apple peel powder with high antioxidant activity can be made from left over apple peels used to make processed products, such as applesauce. These peels are generally considered waste and are discarded without other purposes. This apple peel powder can be used as a supplement in other foods.

Patent	8,551,554
Issue Date	Oct 8, 2013
Inventors	Rui Hai Liu & Kelly Wolfe
Licensee	Leahy Orchards, Inc.

THE PRODUCT

AppleBoost™

A diet rich in plant foods has been suggested to reduce the risk of cancer, diabetes, heart disease, and many other lifestyle-related diseases. Like all plant foods, apples – especially the peels – contain naturally occurring nutrients that have potent antioxidant and anti-inflammatory activity. AppleBoost™ is packaged with no chemical alterations, just 100% organic dried apple peel powder.
