

## THE TECHNOLOGY

'Fortune', a hybrid of 'Empire' by 'Schoharie Spy' combines the desirable attributes of its parents. It combines the favorable processing characteristics of 'Spy', with large size and good coloring, similar to 'Empire'. It appears to be widely adapted to growing regions throughout the United States.

## THE PRODUCT

### Apple 'Fortune'

'Fortune' is a large attractive fruit with yellow flesh that ripens in early September. The 'Fortune' tree has dense foliage and is very vigorous. 'Fortune' has an excellent crisp flavor and is good for quality fresh eating. It is suitable for fresh, roadside, and processed markets. Fortune has been rated favorably by cooperators in the Pacific Northwest, New York, New England, and Mid-Atlantic regions, and has been well received in market trials.
